

NEW CONTRACT EXPANDS SCOTT'S FOOTPRINT IN AUSTRALIA'S MEAT PROCESSING INDUSTRY

Scott Secures Multi-Million Dollar Contract for Large Australian Meat Processor

Scott Technology Limited (NZX: SCT) is pleased to announce a further multi-million dollar contract win within the meat industry to design and build a lamb boning system for one of Australia's largest meat processors, Thomas Foods International (TFI).

The significant \$10 million investment by TFI will deliver improved product quality and increased yield of high value cuts. The system utilises advanced x-ray and vision technology to deliver a high accuracy of cutting, while also bringing significant developments in health and safety by removing much of the heavy cutting activities.

Scott CEO John Kippenberger, said: "We are proud to be partnering with TFI on this project which utilises Scott's demonstrated capabilities in this area.

"Like many industries, the meat processing industry in Australasia and the United States continues to grapple with the challenges of improving worker safety while increasing yields, at the same time as struggling with major issues around labour availability. Scott's world leading automation and robotic systems provide a solution to these significant challenges facing businesses around the world."

Scott's lamb processing technology has proven its value at over 13 processing plants across Australasia. This contract adds to Scott's already growing work volumes as global demand for its unique, world leading lamb automation system continues.

The system is to be installed at TFI's Tamworth plant in NSW and will be designed and built from Scott's Dunedin facility which is the company's centre of excellence for meat processing.

About Scott

At Scott we automate the future. The production line machinery we design and build deliver productivity gains and exceptional reliability to many of the world's leading manufacturers. We also go a step beyond engineering production solutions to actually revolutionising entire industries – using robotics to automate manual processes and create genuine competitive advantage.

For over 100 years Scott has looked to tomorrow and rapidly responded to shifting needs. Today, we have production bases in the United States, Belgium, Czech Republic, France, Germany, China, Australia and New Zealand, customers in 88 countries, and a real commitment to developing new technology and bringing it to market. Across everything we do you will discover true quality, advanced engineering and a renowned design aesthetic.

Scott. Quality that lasts. Quality that inspires.
