

Update from Rocklabs

2018 is shaping up to be a busy year for Rocklabs and our customers. The whole of the SCOTT group is seeing a surge of interest in automation, and sample preparation laboratories are no exception.

We have seen strong interest in our manual laboratory equipment and robotic automated solutions, achieving safety, productivity and quality benefits for our clients across mining industries globally.

We are venturing into new sectors as well with some exciting new product developments for the aggregate industry. We will be revamping our gravity gold concentrator in the coming months to provide a reliable means of handling large samples with irregular grade. So watch for this re-launch. We are also seeing an increasing trend for mobile and containerised laboratories for remote sites.

You can expect to see much more of our people. Andrew Mowlem has moved from Engineering to be more engaged with customers. You will also see Craig Adams developing solutions and specifications. These new faces will assist our core team to ensure we specify and deliver what you need. We are providing refresher and increased training for our agents to assist you to better manage your equipment and achieve the performance you expect.

We are striving to deliver better products and better service, so feel free to contact us anytime to discuss how we can best meet your specific requirements.

We wish you a successful 2018.

Mike Lynn

General Manager – Rocklabs

Videos

We have released two new promotional videos for Boyd Elite and ABM, as well as a maintenance video for the Boyd Elite. You can view the promotional videos [HERE](#), please contact us if you would like a copy of the maintenance video.

Ian Deveurux Book

Ian Devereux, founder of Rocklabs, has captured his life story in a book written by his Granddaughter, Karen Jarvis. The book provides a light-hearted and easy-to-read, vivid account of an inventor and entrepreneur who followed his passion and believed in himself. Ian narrates a gripping account of his life from bullied farm boy, to Ph.D. scholar, to his work as a forensic scientist in the Arthur Allan Thomas case, to family man, and to founder of the highly successful, internationally acclaimed, New Zealand company, Rocklabs. Ian's unorthodox approach and willingness to take huge financial risks gave rise to a niche marketing business model.

There are numerous anecdotes in the book, including Ian's business trips to politically unstable countries where he faced near-death experiences. Ian's generous and trusting nature, formidable intellect and contagious sense of humour shine throughout this book. One amusing anecdote was Ian's practical approach of buying birthday gifts such as a wheel barrow, a pruning saw and a ride-on lawn mower for his wife Rosie.

If anyone is interested in purchasing a copy of Ian's book, please contact Radu Puiu at Rocklabs
